MADE IN ITALY

ARTISAN WIZARD

INNOVATION, SINCE 1800

The “Made in Italy” brand has always been a combination of tradition and innovation: the skills, drawn from the experience of high-quality generational craftsmanship, are constantly renewed through knowledge fueled by an inexhaustible striving for better things. Future meets present taking root in our ancient values, so as to build a bridge of quality and well-being for future generations.

Teknik Wood was born from the passion of a family of carpenters and interior designers who has been working wood for 4 generations.

From this valuable heritage comes the craftsmanship, the meticulous attention to materials and the respect to the environment that made the Made in Italy brand great and appreciated worldwide.

With the same attention and passion so typical of his master craftsmen, Teknik Wood designs and manufactures playgrounds for children and original wooden toys with a vintage flavor yet extraordinarily modern features: safe and fun, but most of all respectful of the child’s abilities and creativity. Teknik Wood is committed to going along your child safely and serenely through his developmental stages.

Thanks to the support of skilled engineers and Pedagogy experts, our company offers a wide range of truly “educational tools” able to satisfy the recreational wishes of the children and the formative goals of Mum and Dad..

OUR FORCE

ONLY THE BEST

Teknik Wood's high level of product specialization lies in "details". We don't take chances. Everything is thought, designed and manufactured with the utmost care. Raw materials are carefully chosen, and each processing stage aims at child's safety.

The latest of the last few months are the PLAYGROUNDS, which are designed for children's entertainment and adaptable to any context.

We know no boundaries, we use our imagination to make everyone's dreams come true.

**"Details" make the real difference.
They make every creation special and unique.**

PLAYGROUNDS

PLAYGROUNDS

On the basis of the experience acquired in the wood and toy world, we can design perfectly functional playgrounds. Moreover, we have the honor of providing a 360 degrees service, from physical space design to true event management, thanks to our collaboration with an important expert in children's entertainment; effectively, total customer service is one of our peculiarities.

Passion for educating today's children through high quality activities: this is our strength, being aware that it will help to forge better men ready to face the future.

From this and much more comes our proposal for those who need to incorporate a top quality educational play area in their own spaces

How do we do it? We offer our customers play areas that are modular And customizable. Our goal is to turn each area into a unique experience.

Ferifè blocks are perfect for internal play areas, designed to entertain and reassure children for a long time: while they wait for their dish, the medical examination, their mothers shopping... and so on. The Baby Moto are perfect for open spaces like hotel parks, farms, cellars and much more.

Book Area

NOTHING BUT THE BEST

Play helps children create happy memories. Positive experiences stick in their brains, so when they grow up they recount them with pleasure: that paves a way for a brilliant future, since today's children will be tomorrow's adults, therefore our prime costumers. A well-equipped play area provides real experiences that, unlike digital and simulated ones, have an important impact on the education and the growth of your child's personality.

We have designed various playgrounds layouts, yet thanks to our experts we're also able to provide ad-hoc spaces.

1. Ferifè Area: the ideal area for sharing funny moments with our wooden blocks!

2. Baby Moto Area: ideal for competing with our balance bike Baby Moto.

3. Lab Area: play areas to recreate educational workshops.

4. Book Area: designed and created for all those structures that value moments of relaxation for the younger children!

LENA LA BALENA

Thought in the Dolomites,
created in the Langhe

With her you can play
And train.
The swing, then,
turns itself into a chair
to slow down
and rest
to read
a fairy tale
or chat
and get inspired.
A swing
or a chair
Simple to transform
Ain't that a tragedy!!!

PLAYING IS A REALLY BIG DEAL

he Ferifè Blocks are made of wood, all identical in shape, yet specifically they don't fit but just lean on one another securely: in other words, a fun and exciting game for young and old that will keep you playing around a table for hours!

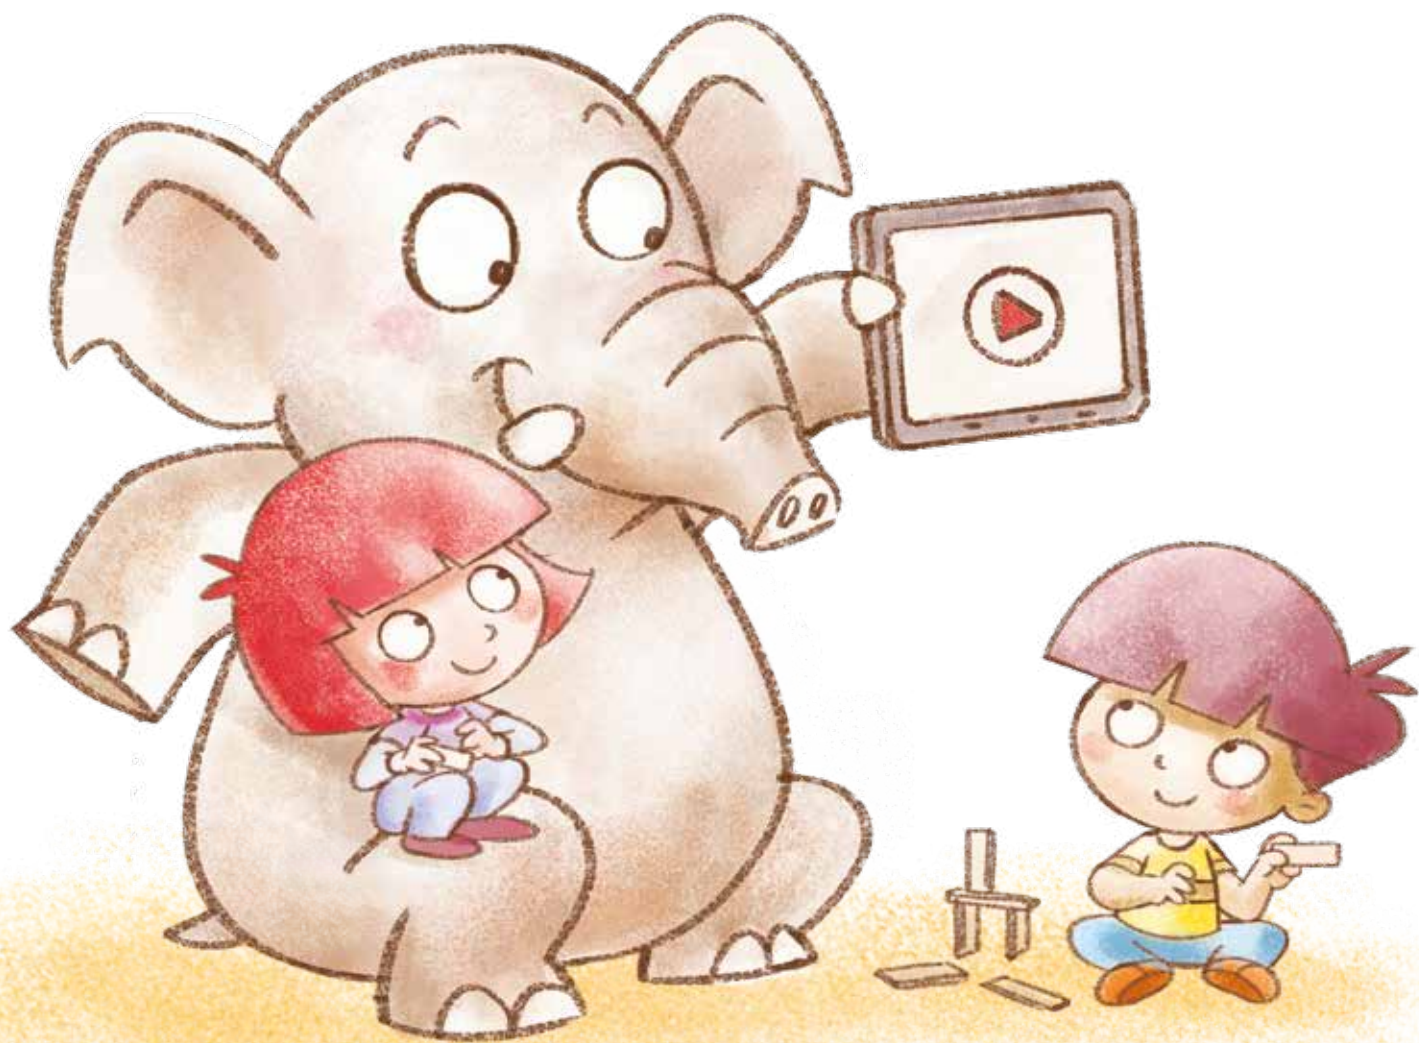

Indeed, this is not just a game, but a real educational tool, teaching children how to improve their sense of balance and weight perception, thus allowing them to build endless constructions.

Most of all, this is an extraordinary teamwork and focus training, being these skills nothing less than fundamental all the way through children's educational path, and then in their working life.

This is Ferifè: a range of board and outdoor building blocks wooden toys for body, mind and heart training.

Mono-blocs made from lime wood, free of foreign substances potentially harmful to children, colored with non-toxic watercolor paints, Ferifè Blocks fully represent the most authentic spirit of the "Made in Italy" brand: creative intelligence and meticulous craftsmanship at each stage of processing, in order to achieve a product so intuitively easy to use that it is "natural".

100% CREATIVITY NEVERENDINGTOY

“Children don’t know how to play anymore”: this is a phrase that is often heard.

Increasingly addicted to gaming and interactive apps, children risk losing the most important component of their childhood: that is, imagination. Today, it is endeavouring for a child to invent a story or a game ex novo, because he is never being encouraged to exercise his own creativity, that capacity which, in a few years, will be helping him to strengthen his intelligence and his ability to understand the world.

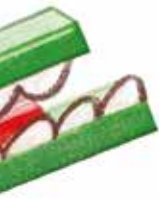

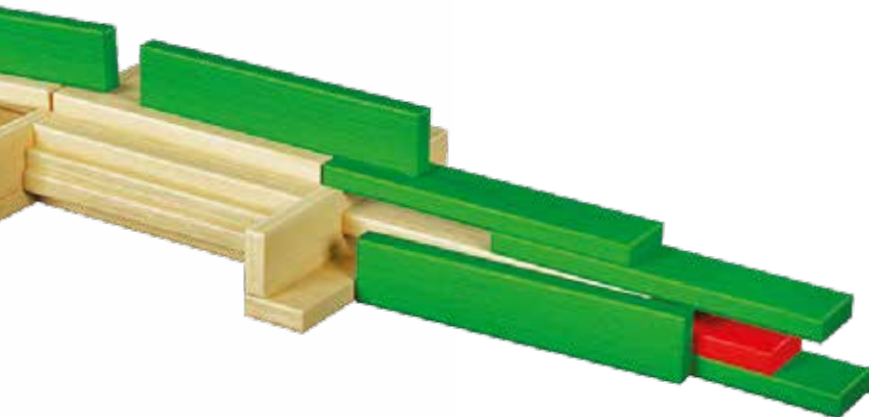

Through the project NEVERENDINGTOY, we want to give our little users the opportunity to combine technology and playfulness.

Registration codes are included with the boxes; after registration, you’ll be sent periodically a variety of construction video clips and pictures to provide the opportunity to play with our building blocks with the help of technology.

BALANCE BIKE

Two wheels to grow

Autonomy is one of the most exciting albeit more sensitive achievements in early child development: it's very important to face this process calmly, so that your child can not only develop excellent motor skills, but also gain self-reliance.

The Balance Bike is the ideal tool for helping your children improve their own balance, as it proposes a series of playful activities aimed at enhancing the motor skills and coordination according to the different stages of development.

BALANCE

Those children who have used the Baby Moto, already mastering their sense of balance, will learn more easily to use the “big boy” bike without feeling any sense of frustration nor trauma.

Do it by yourself

The Balance Bike is not just a game, but a great tool for balance training, fully aligned with the Montessori Principle: “Help me to do it myself.”

The use of the Balance Bike is indeed truly intuitive; within minutes a child, even a toddler, can ride it in complete autonomy with great satisfaction. The fledgling cyclist has only to take a seat on the Balance Bike, appropriately adjusted according to his height, and, holding onto the handlebars, perform the action of walking. Once he is more familiar with this peculiar means of transport, the child will increase the speed, switching from two feet to alternate foot push, which will lead to improve his coordination, hence in a very short time he will be able to gallop like a foal, always experimenting new paths and uses that will increase his fun as well as his motor skills and self-esteem: he runs keeping his balance on increasingly longer stretches, climbs and slopes gradually more demanding.
